JMNewsMailSubscribtion

The JM News Mail Subscription GoLive Extension will add a hole form to the form pallet. The "News Mail Subscibtion" form. Including the PHP script that ads or remove the email addresses from the subscribtionlist, and send a confirmation mails.

The JM News Mail Subscription is best used for minor sites, with no need for a big and advandc email news system, and with a smal numbers of subscriberes. However ther are no limit to the numbers of subscribers.

Install GoLive Extensions

Unpack the zip file and install the GoLive extension by moving or copy the extension folder into your Extend Scripts folder in the GoLive Modules directory.

GoLive Application Folder > Modules > Extend Scripts >

Restart GoLive so the actions are activated. And you are ready to go!!

How To Use News Mail Subscribtion

When instalt the JM News Mail Subscription Extension will add a new form item to the form pallet.

News Mail Subscribtion

Drag the News Mail Subscription icon to the pages where you want the News Mail Subscription form to bee.

The form contains a field where the user ads his/heres Email adress, and two radio buttons to subscribe to, or unsubscribe from, the news mail.

the script checks if the email is valid and if its on the news mail list. Errors and confirmations will be shown in the form when the email adress is submited, and a confermation email will be send to the user.

You can style the form as you normaly do.

```
// .....  
$file = "subscriptionlist."  
.....
```

Set Email Subscribtion List File

In the source code finde the \$file variable. and change it to what you want the subscribtion list file name to bee. and set the url to where you want the list to bee

```
// ***** MAIL INFORM  
$from_email="Your Name <na  
$replayto="name@yourdomain
```

Set Email Adress

In the source code finde the \$from_email and \$replayto variables. and set your name and email adress.

```
// ***** FORM MESSAG  
$mainmessage = "Insert your  
$errormessage1 = "Error: Th  
$errormessage2 = "Error: Th  
$errormessage3 = "Your Emai  
$errormessage4 = "Your Emai  
$message1 = "Your Email has  
$message2 = "Your Email has
```

Set Form Messages

In the source code finde the form messages variables.
\$mainmessage - Change the Main messages to your like
\$errormessage1 to 4 - Change the Errors messages to your like
\$message1 and 2 - Change the Confirm messages to your like

```
// ***** EMI  
$mail_subject1="Confermati  
$mail_message1="Your email
```

Set Email Messages

In the source code finde the Email confirmations messages variables.
\$mail_subject1 & 2 - Change the Mail confirmations subject messages for subscribtion and unsubscribtion
\$mail_message1 & 2 - Change the Mail confirmations text messages for subscribtion and unsubscribtion

Attention

The page with the form in it must to have the suffix .PHP to tell the server to parse it.

You will need a web server capable of running PHP. Most new web servers do this by default.

Problems

If you cant get the extension to work pleas feel free to contact me.
