

Installation

Hot to use the action

Problems

Legal Information

JMSlideOpenWindow

The action will 'slide'open one or more windows to a size and screen placement of you choice.

You can also resize and replace an already open window by calling the window with the action.

Install GoLive Actions

Unpack the zip file and install the GoLive action by moving or copy the files into your JMActions folder in the GoLive actions directory.

GoLive Application Folder > Modules > JScripts > Actions > JMActions

It's always a good idea to put all your third party actions in a separate folder. If you don't have a "JMAction" folder in the Actions directory, just add a new folder in the Actions folder and name it.

Restart GoLive so the actions are activated. And you are ready to go!

How To Use SlideOpenWindows

The action can be used as head action, body action and on links. It can be executed with both mouse events, OnLoad, OnUnload, OnParse and OnCall.

Parameters

Open page (URL) - Select the HTML document you want to open in the slide window.

Slide open speed - Select the speed witch the window shal slide open. 1 is the slowest speed.

Slide open windowname - Give the slideopen window a unic name. or if you want to resize and replacing an alredy open window, use that windows name.

SlideOpenWindow

SLIDE OPEN WINDOW 1.2

Open page (URL) in slide window:

(Empty Reference!)

Window slide open speed:

5 (1=Slowest)

Slide open windowname:

SlideWindow1

WINDOW SIZE:

☒ Full screen

Width: px ☐ Max width

Height: px ☐ Max height

Window Size

Full Screen - When selected it overwrites any width and height settings and opens the window in full screen. Uncheck it to use width/height settings.

Width - Set the width of the window in pixels. If the screen is smaller than the window, the width will be the screen width.

Height - Set the height of the window in pixels. If the screen is smaller than the window, the height will be the screen height.

Max Width / Height - When selected they overwrite width or height settings and open the window in full screen width or height.

WINDOW POSITION:

☒ Center window

Offset left: pixels.

Offset top: pixels.

Window Position

Center Window - This option is enabled by default. When selected the window will be centered on the screen. Uncheck it to use offset.

Offset left / top - Place the window where you want on the screen. Uncheck Center Window to avoid selecting it overwriting of offset position.

WINDOW OPTIONS:

☒ Allow user to re-size?

Scroll ☐ Menu ☐ Dir. ☐

Status ☐ Tool ☐ Loc. ☐

Window Options

Set the window's chrome to how you want the window to look

Allow user to re-size - This option is enabled by default. Uncheck it to avoid resizing.

Scroll / Menu / Directory / Status / Tool / Location - These options are disabled by default. Check boxes to enable them.

Attention

This action works best with windows with width or height size over 400px. The smaller the window is, the lower the slide speed should be. The user should always be able to resize and scroll the window when handling large documents.

Safari

The vertical slide opening is not supported in the Safari browser. I hope to be able to include this in the next version. In Safari the window will open the assigned height and slide to the assigned width.

Problems

?

Action is greyd out.

Are you having problems with the action not being visible or is greyed out? The fix is very simple.

1. Open the action file in GoLive, just like any other file.
 2. Save the file using "save as" with the original name.
 3. Restart GoLive and the action should now be available.
- (Doing this will cause the icon to disapar but the action shud now work)

GoLive CS2.

GoLive CS2 users may have some problem with using 3part actions do to a minor bug in CS2.

The promlem is that CS2 wont use the action (put it in the scriptLib). normaly this problem is solved by flatten the scribtLibery when adding the action (normaly this only has to be don first time using the action).

Another solution if flatning the scriptlibery dont work is to open the action file in GoLive, just like any other file. make a smal change, an change back agin and the save it. Or do as if the action is grayd out (see above)

If you cant get my actions to work pleas feel free to contact me.
