JMAntiSpam

The JM Anti Spam GoLive Action allows you to make E-mail links, without having the E-mail adresse in the source code. By cloaking your E-mail adresse with the Anti Spam Action, you prevent E-mail harvesters, spamboots and webcrawlers in finding it, and adding them to spam list.

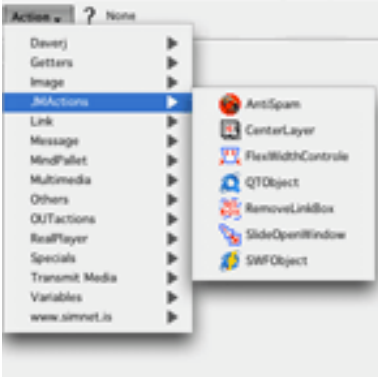

Install GoLive Actions

Unpack the zip file and install the GoLive action by moving or copy the files into your JMActions folder in the GoLive actions directory.

GoLive Application Folder > Modules > JScripts > Actions > JMActions

It's always a good idea to put all your third party actions in a separate folder. If you don't have a "JMAction" folder in the Actions directory, just add a new folder in the Actions folder and name it.

Restart GoLive so the actions are activated. And you are ready to go!

How To Use Anti Spam

Palce a body action in the document where you want the E-mail link to be, chose the Anti Spam action and fill out the parameters you want to make use of.

Parameters

E-Mail Adresse - Fill in the recipients name, domain and surfix (eg .com/.co.uk)

CC Recipient - Fill in the CC-recipients name, domain and surfix.

BCC Recipient - Fill in the BCC-recipients name, domain and surfix.

Mail subject text - Give the E-mail a subject.

Mail body text - Put some body text in the mail.

Link text - This is the E-mail link text, by default it is the E-mail adresse.

Style name .class - Give the link a .class name, so you can style the link with CSS.

Title - The title of the link. The text that are shown in tooltip.

Status text - The text showing in the statusbar.

Problems

Action is greyd out.

Are you having problems with the action not being visible or is greyed out? The fix is very simple.

1. Open the action file in GoLive, just like any other file.
 2. Save the file using "save as" with the original name.
 3. Restart GoLive and the action should now be available.
- (Doing this will cause the icon to disaper but the action shud now work)
